# VI INTERNATIONAL CONGRESS CAI ACADEMY

October 28/29, 2011  
PALAZZO DELLA GRAN GUARDIA  
VERONA

In collaboration with

Dear colleagues, we are facing an historical moment where computer aided implant surgery has reached peak levels of acceptance giving proof of the clinical efficacy of computerized procedures. We are experi-

encing enthusiasm and positive moments being helped by a continuously improving technology that consistently fulfils the needs of our patients. The minimally invasive approach that these procedures entail has to be regarded as an ethical obligation for a clinician, thus computer aided surgery can be of great support in this particular area.

Precise treatment indications and state of the art of computer aided implant surgery have still to be defined. For this reason the Congress will focus on the need of defining the state of the art in research and clinical application. Two main areas will be analyzed: topics of current research and current clinical application.

Renowned speakers that are at the moment considered the excellence in these fields will share with us their knowledge and vision.

I look forward to meet you in Verona.
